

WATER
PRO  **TEG**

A reliable solution against
water damages

Our vision:

- To be the world leader in prevention systems to prevent water damage in residential, industrial and commercial areas.

Our mission:

- To provide a product assuring peace of mind and protection of the environment through our system, by controlling serious incidents caused by water in all sectors.

Our product:

The aim of our product is to prevent damage caused by water.

The product is an electronic valve installed at the main water entrance that automatically shuts off when the control panel receives an overflow signal. This product is extremely effective in preventing water overflow caused by the hot water tanks, bathtubs, sinks, toilets, dishwashers, washing machines, etc. All you do is place the wireless sensors anywhere you foresee as a potential trouble spot.

• Product description

- The CSA 125.3 approved electronic valve shuts off water at the main point of entry when the sensor detects a leak. This WPT valve comes equipped with a Quick Connect Jack.

- The control panel is the Main Interface that is in constant communication with the sensor and the electronic valve. The entire System is Certified CSA and UL

- The wireless sensor is installed at strategic locations susceptible to water damages.

- The remote control allows you to manually open or close the valve by sending a signal to the control panel.

- The UL Power Adapter comes equipped to provide 12V AC to the control panel.
